

Homework 02

Course: Visual Programming with Dynamo

Date: 29.03.2023

- 1) For all not succeeded to create a full parametric Lego Brick with 'parametric' nobs:
There is a working brick placed on Blackboard. Feel free to load and use it inside your projects to go on with that.
- 2) Based on the last lecture (les 02) study the presentation placed on Blackboard and try to create a 'roll-out' of all bricks in your own small Lego project.
Tip: There is one major Trick you need to figure out: It is called lacing.
Try to help each other and figure out what that means and why it is important. 😊
- 3) If you succeed with the basic roll out -
try to get the material and (instance) nob settings shown in your roll outs.

I expect the homework to be done before our next lecture (coming week, 05.04.2023, 10:30).

Success, Boris.
